

Dual Eligible Special Needs Plan (D-SNP) Model of Care

Dual Eligible Populations Face Unique Challenges

**58% are cognitively or
mentally impaired**

**55% have 3+
chronic conditions**

**86% are 150% below the
federal poverty level**

Manage the Complexity of Dual Eligible Beneficiaries

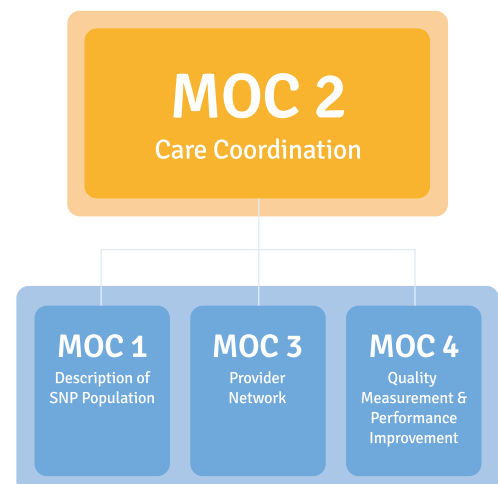

Dual eligible beneficiaries are one of the most clinically complex populations, with their high rates of comorbid conditions, disability and mental illness. As a plan serving duals, you must not only manage the complexity of patient care, you must do so while meeting stringent regulations and controlling costs.

Comply

To help your plan meet care delivery imperatives and state regulations, we've developed a fully compliant care coordination solution aligned with MOC 2 requirements that includes all of the mandated tools: health risk assessment, individualized care plan, interdisciplinary care team, risk stratification, transitions in care management, and ongoing care management and reporting. Working to seamlessly interface with your team, we deliver the required level of support to your most vulnerable members while ensuring compliance with all care coordination requirements.

**Turnkey solution meeting all requirements for
MOC 2 while supporting MOC 1, 3 and 4.**

Stratify

We have extensive experience with the advanced level of care coordination required for dual eligible beneficiaries. Our licensed clinicians are trained in our unique biopsychosocial approach, called Dynamic Somato-Social Theory™ (DSST), providing medical, behavioral and social support across all interventions, including complex case management. We apply advanced informatics to analyze and stratify members into appropriate levels of risk, ensuring the right resources are applied appropriately throughout your population.

Scale

Our skilled team is backed by essential tools, enabling us to scale quickly, work efficiently and grow as you do. From the initial health risk assessment to managing a transition in care, our system produces automated workflows to streamline productivity and place the focus on the needs of your members. With our real-time data and analytics, we constantly monitor member risk and seamlessly realign care levels when appropriate.
